

Drano or Bottle Bombs

Do Not Touch

Leave the area and call the proper authorities

These bombs contain caustic chemicals such as Drano or other acid based chemicals. They usually contain a portion of chemical liquid, aluminum foil, and possibly water. When complete, they are capped and await movement to activate the bomb. These bombs should be considered extremely explosive and unstable with a reach up to 15 feet or more. Drano or Bottle bombs may not detonate until disturbed causing the plastic bottle pieces to become like shrapnel.

WARNING

Causes chemical burns and may include serious physical injuries including loss of limb or life.
